

DUAL TELEPHONE HYBRID

The powerful evolution of our highly successful single Hybrid-2. Designed for modern broadcast environments, this advanced active interface combines precision digital control with intelligent features such as automatic ducking, dramatically improving speech clarity and on-air intelligibility.

Built for seamless recording and live broadcasting, the Dual Telephone Hybrid-2 delivers dependable, crystal-clear communication between callers and presenters. Whether you're producing talk shows, interviews, or live call-ins, it ensures every voice comes through clean and professional.

Acting as the perfect bridge between professional audio equipment and the public telephone network, the Hybrid safeguards both your studio gear and telephone lines. Its smart design automatically adapts to varying line levels and conditions, guaranteeing stable, high-quality connections every time.

Active balancing interface
Ensures stable and reliable high quality signal transmission

Variable high and low cut filters allow precise control over audio frequency ranges for optimal sound clarity

Input level accepts a balanced line level input at 0dBu, allowing seamless integration with professional audio systems

External adjustable R/C balance
Facilitates easy fine tuning of receive and send audio levels to your specific needs

Superb audio separation achieves more than 30dB between incoming and outgoing signals, ensuring crystal-clear audio quality

Auto ducking automatically reduces caller level to enhance speech intelligibility of the DJ
